INFORMED CONSENT, CONVENIENTLY DELIVERED

Glasgow Royal Assisted Conception Services: Access to Electronic Consents

As a clinic, we are now able to offer electronic consents which provide a user friendly and flexible approach to the consenting process.

Fertility Consent is a secure online platform which enables patients to remotely access the relevant medical and legal information to allow them to provide informed consent. Digitally signing consent forms also eliminates the need for paper information leaflets and consent forms.

Fertility Consent provides a complete library of Human Fertilisation and Embryology Authority (HFEA) consent forms and individual clinic consent forms that are automatically allocated to each patient and partner according to your treatment and personal circumstances. The platform also provides a library of materials and easy-to-understand videos that explain your treatment and HFEA forms in a clear and engaging way. More information can be found at <https://fertilityconsent.com/>

We would like to start this process whilst you are on the waiting list

In order to start this process we require some details for **both patient & partner**, including:

- Full name (as per your ID)
- Date of birth
- CHI (if known)
- Mobile telephone number
- Email address
- Marital Status

Please email the above information, for **yourself and your partner** to:

ggc.acsconsentforms@ggc.scot.nhs.uk in order to begin the consents pathway.

Once we create your profile on the platform you will receive a text message with a link and a unique phrase to enable you to get started.

If you require additional support or have any issues using an online process please get in touch so an alternative pathway can be provided.

Yours sincerely,

Helen Lyall
Lead Clinical Consultant
