 Diagnostics Directorate
 West of Scotland Specialist Virology Centre
 Level 5, New Lister Building
 Glasgow Royal Infirmary
 10-16 Alexandra Parade
 Glasgow, G31 2ER

Dear Doctor,

Your patient is under the care of the Assisted Conception Service (ACS) at the Glasgow Royal Infirmary, as I am sure you are aware. The Infectious Diseases in Pregnancy Screening Programme no longer offers rubella IgG testing as part of the antenatal screening. This has been replaced with assessment of MMR immunisation history and postnatal immunisation, as required. As an ACS patient this can be performed prior to fertility treatment, offering protection for any subsequent pregnancy from measles and rubella. The ACS and the West of Scotland Specialist Virology Centre would be very grateful for your assistance.

To be completed by ACS:

Patient Identification Sticker or:	
Name:	
DoB / CHI:	

To be completed by General Practice:

Please tick the appropriate box:		
Documented: 0 doses of MMR	Documented: 1 dose of MMR	Documented: 2 doses of MMR
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Required actions based on immunisation history:		
2 doses of MMR required	1 dose of MMR required	1. Patient to return this form to ACS
1. Date of dose 1 of MMR: <input type="text"/> (Dose 2 to be provided 1 month later)	1. Date MMR administered (ACS treatment to begin no earlier than 1 month later): <input type="text"/>	
2. Date of dose 2 of MMR administered: <input type="text"/> (ACS treatment to begin no earlier than 1 month later)		
3. Patient to return this form to ACS	2. Patient to return this form to ACS	

Please note, immunisation with MMR vaccine whilst pregnant or shortly before becoming pregnant has no known risk. MMR vaccine is not recommended in pregnancy as matter of caution.

Your assistance is greatly appreciated,
 Dr Rory Gunson
